

Mr. Daniel Chung
RecycleTech Corp

11-28-07

Daniel I wanted to send you a note to let you know how well our EPS recycling is going since the installation of the condensing machines.

The simplicity of the whole process made starting up two sites in the same week a breeze, and training new staff is easy.

The impact was noticeable immediately. Our Trash pulls to the landfill reduced significantly and the weight per pull increased by 50%. We calculated that with each super sack of ingots we are saving four full 40 yard containers going to the landfill. With 30 super sacks filled in the first three months the cost savings is definitely realized as soon as the operation starts.

Installing the condensing machine helped us achieve our goals of cost reduction, recycling as much of our waste as possible, with little mess, and no disruption to our operation.

We host tours of our facility quite often, and the condensing machine is one of the highlights of the tour, because our visitors are amazed at our whole recycling process and how easy it all is. We are proud to show that we are recycling a much larger tonnage than we are sending to the landfill, and the EPS recycling plays a big role in that process.

We look forward to our continued relationship.

Regards,
Dan Perdue
And the Whole NFM Recycling Team
